

Here at 4:30PM we pride ourselves on being able to deliver excellent integration support to the Healthcare sector. Whilst we are a relatively new business, we are able to offer our clients a service that few will be able to compete with, either on price or quality of service.

We provide healthcare integration support for applications that run on IBM Websphere, Oracle's Javacaps and e*Gate and we can support applications that use HL7 messaging or other bespoke messaging protocols.

We tailor our support to meet the needs of each individual client and provide an incident support package enabling each client to track the progress of their incidents and grade their level of severity accordingly. We act according to your priorities.

If you would like to discuss your Healthcare integration support needs, then please get in touch.
